

**ENGLISH RS 222-2022**

**Phoenix PSM Interface Modules PSM-V24/TTY...**

This package slip is valid for the following plug modules:

Type	Order No.	Operating mode
PSM-V24/TTY/SB	27 87 34 7	half-active
PSM-V24/TTY/BB	27 87 35 0	half-active
PSM-V24/TTY/AK/SB	27 61 41 5	active (passive, half-active)*
PSM-V24/TTY/AK/BB	27 61 40 2	active (passiv, half-active)*
PSM-V24/TTY-P/PA/SB	27 87 24 0	passive
<b>PSM-V24/TTY-P/PA/BB</b>	<b>27 87 25 3</b>	<b>passive</b>
PSM-V24/TTY-P/HA/SB	27 87 28 2	half-active (passive)*
PSM-V24/TTY-P/HA/BB	27 87 29 5	half-active (passive)*
PSM-V24/TTY-P/AK/SB	27 87 22 4	active (passive, half-active)*
PSM-V24/TTY-P/AK/BB	27 87 23 7	active (passive, half-active)*

\* Alternative mode of the TTY side

**Explanation of the type code**

**Example: PSM-V24/TTY-P/AK/SB**  
 Phoenix V.24 connection (here: male)  
 Phoenix TTY connection (here: female)  
 Operating mode (here: active)  
 Potential separation

V.24 ≙ RS-232

**1. Description / Applications**

**• Interface adaptation between V.24 and TTY equipment**

**• Bridging of distances of up to 1000 m between V.24 equipment**

Independent of a protocol, the interface converters convert the V.24 voltage signal to the signal level of the 20 mA current loop interface. Software handshaking is supported.

The plug modules differ by the possible **operating modes active, half-active and passive**, and by the presence or absence of **potential separation** (module identification "-P").

**With distances of > 100 m, it is recommended to use modules with electrical isolation!**

The modules with potential separation provide electrical isolation between the RS-232 and TTY interfaces.

**2. Installation Notes**

**2.1. Handling**

• V.24 interface of the computer 25-pos.: Plug the module onto the interface (see Fig. 1) and fasten the fixing screws manually tight, using an appropriate tool if necessary!

• V.24 interface of the computer 9-pos.: Adaptation between computer and 25-pos. female connector of the PSM converter with an **adapter cable** (Fig. 4): PSM-KAD-9SUB 25/BS (Order No. 27 61 29 5).

**Refer to the block diagrams for the pin assignment of the SUB-D connector!**

**2.2. Voltage Supply of the PSM Plug Modules**

• Via a separate plug-in power supply (connection: see Fig. 5): PSM-NT-110AC/15DC/100, Artikel-Nr. 2787457, bzw. PSM-NT-230AC/15DC/100, Artikel-Nr. 2787444

• or via connection cable PSM-VLTG/1,5METER (Order No. 2787460) from any power supply (15 V DC, regulated).

• or via the V.24 (RS232) interface (see block diagrams): Pin 18 (+12 V DC) and Pin 7 (SGND/ground).

**2.3. RS-232 Interface Adaptation**

Set the DTE/DCE switch on the top of the housing (Fig. 5)!

**Prerequisite:** The RS-232 interface type of the connected device (computer, printer, etc.) is indicated in the appropriate manual!

**For connection to:**

- Data terminal equipment (DTE): → Set switch to DTE.
- Data circuit-terminating equipment (DCE): → Set switch to DCE.

If the RS-232 interface type of the peripheral device is unknown, you can set the correct configuration of the RS-232 (v.24) interface **by trying out the switch setting.**

**2.4. Examples of the TTY Coupling of Two PSM Modules**

**2.4.1. Two active modules**

**2.4.3. Half-active and active\* module in half-active operating mode**

The TTY remote station must feature potential separation between transmitter and receiver!

**3. Dimensions**

**3.1. without potential separation**

**2.4.2. Two half-active modules**

**2.4.4. Active and passive module**

**3.2. with potential separation**

**4. Block Diagrams**

**4.1. PSM-V24/TTY.../AK/...**

**AK module circuit versions**

Mode:	transm. active	receiver active
<b>fully active</b>		
Current output	Pin 9	Pin 24
Current input	Pin 10	Pin 25
<b>passive</b>		
Current output	Pin 9	Pin 24
Current input	Pin 8	Pin 12

**4.2. PSM-V24/TTY-P/HA/...**

**HA module circuit versions**

Mode:	transm. active	receiver passive
<b>half-active</b>		
Current output	Pin 9	Pin 25
Current input	Pin 10	Pin 24
<b>passive</b>		
Current output	Pin 17	Pin 25
Current input	Pin 10	Pin 24

**4.3. PSM-V24/TTY...**

**HA module circuit version**

Mode:	transm. active	receiver passive
<b>half-active</b>		
Current output	Pin 9	Pin 25
Current input	Pin 10	Pin 24

**4.4. PSM-V24/TTY-P/PA/...**

**PA module circuit version**

Mode:	transm. passive	receiver passive
<b>passive</b>		
Current output	Pin 9	Pin 24
Current input	Pin 10	Pin 25

**8. PSM-V24/TTY... Technical Data**

- Supply voltage via plug-in power supply: 15 V DC ... 18 V DC
- D-SUBconnector (RS-232): 12 V DC ± 5 %

Modul version	active	half-active	passive
Nom. current consumption approx.	85 mA	70 mA	35 mA

**RS232-(V.24) interface**  
 - Connection acc. to CCITT V.24/DIN 66259 part 1 D 25-SUB (male) or D 25-SUB (female)

TTY interface	active	half-active	passive
- Loop current	2x20 mA	1x20 mA	-
- Load	≤ 400 Ω	≤ 400 Ω	-
- V <sub>res</sub> (TTY receiver)	≤ 2.75 V	≤ 1.2 V	≤ 2.75 V

- Transmission length 100 m / 1000 m<sup>2</sup>, twisted pair
- Connection D 25-SUB (female)
- Transmission channels (I/O) 2(1/1), Tx/Rx/D, full duplex
- Transmission rate 9.6 kBd, NRZ<sup>1</sup>
- Bit distortion ≤ 3 % / ≤ 2 %<sup>2</sup>
- Bit delay ≤ 1.2 μs / ≤ 1.5 μs<sup>2</sup>

**General Data**  
 Operating temperature range 0 °C to +50 °C  
 Test voltage 1 kV DC, 1 min.<sup>2</sup>  
 Electrical isolation RS-232/TTY<sup>2</sup>  
 Housing material ABS / aluminum, anodized<sup>2</sup>

<sup>1</sup>) Non Return to Zero Code  
<sup>2</sup>) with modules with potential separation
